

Dear Hiring Team at Nirmata,

I'm Ayush Karanth, a third-year Information Technology student at VESIT, Mumbai, applying for the Software Engineer Intern role. I'll be direct: Nirmata's stack — Kubernetes, Docker, Prometheus, and microservices — is exactly what I've been building with in production over the past year, not just reading about.

For my project CodeCraft, I orchestrated a Next.js SaaS app on Kubernetes with health checks, resource limits, and rolling updates for zero-downtime deployments. I instrumented it with Prometheus to monitor pod health, latency, and throughput in real time, and set up custom alerting on top. CI/CD ran through GitHub Actions — unit tests, Docker image builds, and Kubernetes deployments triggered on merge. When I built NovaScan, I wrote Kubernetes manifests for a multi-service AI platform designed for self-hosted enterprise deployments inside AWS and GCP VPCs, paired with a Redis caching layer and MongoDB Atlas for high-throughput webhook ingestion.

On the backend, my internship at Codeflare Labs involved containerizing a production Node.js/Express REST API (40+ endpoints) with Docker and implementing OAuth 2.0 with middleware-enforced access control — problems I suspect look very familiar to your engineering team.

What draws me specifically to Nirmata is the open-source angle. Kyverno's scale — 3.2 billion downloads — means real-world policy enforcement at a level most interns never get close to. I'd genuinely like the chance to contribute to that ecosystem, even in a small way. I've followed the cloud-native CNCF space closely and understand why policy-as-code matters as Kubernetes adoption grows.

I'm comfortable with Java, Python, TypeScript, and JavaScript, and I pick up new languages quickly (I learned FastAPI for NovaScan in a week). I'd be eager to get into Go during this internship.

These are the live demos of both codecraft and novascan
<https://vox-woad-theta.vercel.app/>
<https://nova-scan.vercel.app/>

I'd love to contribute to Nirmata's platform and learn from your team. Thank you for your time.

Best,

Ayush Karanth
